

Sinbran GmbH

Proven | Qualified | Innovative

At the turn of the 2013/2014 Sinbran GmbH was founded by Wolfgang Jander. He has taken over the SINBRAN® business part of W. L. Gore & Associates GmbH in a management-buy-out and is leading it independently now.

Anke Content was joining the team a few months later. She is taking over the sales part of the company.

After studying chemical engineering Mr. Jander was engaged for over 27 years in the W. L. Gore GmbH in different tasks for the Industrial Filtration. In the nineties it was his job to develop SINBRAN® being the product specialist and introduced it successfully into the market.

Before founding the Sinbran GmbH Mr. Jander was the business leader for Gore's global business for the Industrial Filtration Division where SINBRAN® was a part of.

Ms. Content was working several years in sales for industrial capital goods after getting the engineering degree. At W. L. Gore GmbH she was engaged in the application technology. Later she accepted the commitment of technical sales for filter bags and SINBRAN® filter elements.

With the combined experience of more than four decades in industrial filtration the Sinbran GmbH is able to consult its customers in process technologies requesting SINBRAN® filter elements and is helping to open up new market areas.

The extensive know-how ensures that the well-known high standards of production and quality of SINBRAN® filter elements by the Sinbran GmbH continue to be met.
